

BREACH PROTECTION WITH WARRANTY

by ProStream SDE

The ProStream SDE (Secure Data Ecosystem) solution provides 24/7 managed vulnerability assessment, penetration testing, and threat response, giving our customers peace of mind with advanced cyberattack protection. Included with all SDE annual subscriptions, ProStream's Breach Protection Warranty covers you with up to **ZAR 1 million in remediation expenses in any annual cycle**. This warranty extends to all registered technology devices that use an IP address.

THE SDE SECURITY OPERATION

Cybersecurity is quickly becoming too difficult for most organisations to handle on their own. As well-funded attackers use subtle strategies to avoid detection, organisations of all sizes and industries are increasingly turning to the ProStream SDE service for assistance.

Our automated AGI-enabled global security solution monitors and secures your environment 24 hours a day, seven days a week. We detect any potential breach points in your network and systems, execute AGI-driven investigations, and

provide remediation guidance, all before attackers are able to have an impact on your organisation.

ProStream's SDE is underpinned by over 20 years of AGI and machine learning in respect of penetration threat management and real-time vulnerability assessment. SDE runs 24/7, with an average time from detection to resolution instructions being measured in minutes. SDE keeps our customers a step ahead of attackers and protected from catastrophic ransomware events and breaches.

WHY CHOOSE THE PROSTREAM SECURE DATA ECOSYSTEM?

Continuous internal and external autonomous vulnerability assessments:

With ProStream SDE, your network is under constant surveillance. Our advanced tool performs 24/7 vulnerability assessments, identifying and mitigating potential threats before they can cause harm.

Automated autonomous penetration testing:

Gone are the days of scheduled security checks. ProStream SDE continuously conducts automated penetration testing, simulating real-world attacks to uncover and fix vulnerabilities in real-time, ensuring your defences are always robust and up to date.

Advanced threat detection:

Powered by one of the most sophisticated Artificial General Intelligence (AGI) in the cybersecurity field, ProStream SDE offers unparalleled threat detection capabilities. Our AGI constantly learns and adapts to emerging threats, providing proactive protection against malware, ransomware, and other cyber threats.

Comprehensive IoT assessments:

In the era of the Internet of Things (IoT), every connected device is a potential entry point for cybercriminals. ProStream SDE performs thorough IoT assessments, securing all your connected devices and ensuring your entire network is safeguarded.

Scalable:

As your business grows, ProStream SDE scales with you, offering flexible solutions to meet your evolving needs.

Economically geared for the Southern African market:

Our global solution and local approach ensure that your business receives the most relevant and cost-effective protection. Dollar-Rand exchange rate fluctuations do not affect the South African pricing, making the uptake pricing truly affordable.

Peace of Mind:

Rest easy knowing your business is protected by state-of-the-art cybersecurity technology.

User-Friendly:

Our intuitive interface makes it easy for anyone to manage and monitor their cybersecurity, regardless of their technical expertise.

South African one million Rand warranty:

We stand by the efficacy of our product. ProStream SDE comes with an annual one million Rand breach warranty against network, ransomware, and IoT breaches, providing you with financial security and confidence in our solution. (Subject to initial investigation and recommended corrective actions being implemented.)

So, protect your business from the ever-growing threat of cyberattacks with ProStream SDE. Trust in our advanced technology and comprehensive warranty to keep your network, data, and devices secure.

Join the future of **cybersecurity** today.
